

```
import random

# Generate random temperature and humidity values
temperature = random.uniform(20, 40) # Random temperature between 20 and 40 degrees Celsius
humidity = random.uniform(30, 70) # Random humidity between 30% and 70%

# Check for alarm condition
if temperature > 30 and humidity > 60:
    print("Alarm: High temperature and high humidity detected!")
    # Add code here for the actions to be taken when an alarm is detected
else:
    print("Temperature:", temperature)
    print("Humidity:", humidity)
    # Add code here for normal operation or additional checks

# Rest of your code...
```
